

# SELF-MANAGED CLOUD

## The ball's in your court

You want the highest level of flexibility to control your own cloud environment but you're uninterested in hosting your own data center to do it. We've got just what you're looking for in our self-managed cloud. You're free to add servers to your heart's content, but no matter what, you'll pay only for what you use.

“

The level of service across the board from OTAVA has been nothing short of exceptional. It's only getting better and better as the years go along. Whenever we pick up the phone, someone is immediately available to answer questions.

”

Brian Allen  
CEO

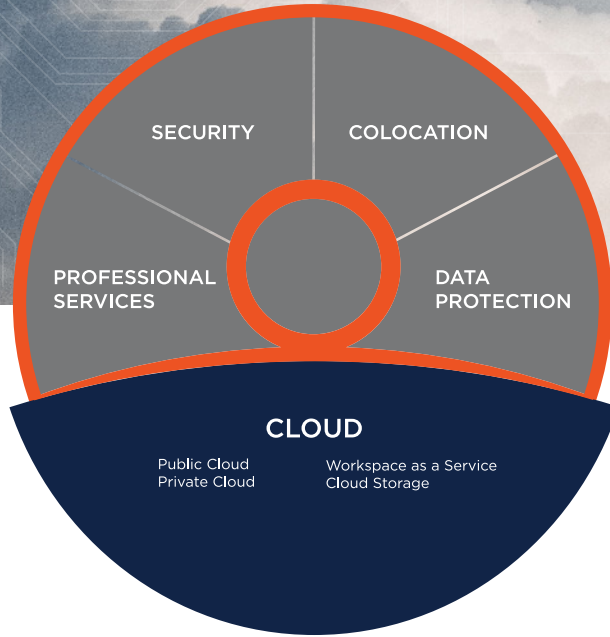

### > Flexibility + full isolation + cost optimization = total peace of mind

We'll configure the hypervisor and give you access. Everything else we place into your capable hands. We'll monitor and manage the physical infrastructure--ie networking, physical blades, etc. You manage from the hypervisor through the rest of the stack. Our usage-based model ensures that you're only paying for what you need, and nothing else.

### > Unmanaged cloud, manageable costs

Concerned about cloud cost management? Never fear! Use SprawlGuard® protection to fully optimize your cloud costs and monitor the spend your self-managed servers are generating. Any cloud provider can give you root-level hypervisor access, but we're the only ones who will fully expose your usage and spend to eliminate those nasty end-of-the-month surprise bills. SprawlGuard® protection is automatically included with all self-managed cloud environments. Why should we charge you money to save money? To us, that equation doesn't make sense and isn't a win-win.
